Sheet B
Biology of the species

Code: SBR0309Sad

Biology

Somatic magnitude measured (LH, LC, etc)*		LT		Units*	cm
Sex	Fem	Mal	Both	Unsexed	
Maximum size observed			53		Reproduction season
Size at first maturity			25		Reproduction areas
Recruitment size					Nursery areas

Parameters used (state units and information sources)

		Units	Sex			
			female	male	both	unsexed
Growth model	L_{∞}	cm			53.9	
	K	an-1			0.128	
	t0	an			-1.02	
	Data source	Krug, H.M, 1989 (Spain)				
Length weight relationship	a				0.0124	
	b				3, 1370	
	M				0.2	
	sex ratio (mal/fem)					

Comments

The growth parameters and the length weight parameters are collected from fishbase

Comments

F

The value of $F_{0, 1} = 0.2$, it seems that it is doubtful that must be verified

Indicators and reference points

Criterion	Current value	Units	Reference Point	Trend	Comments
B	5E+10				
SSB	1797.2				
F	0.199				
Y					
CPUE	37.43				

Stock Status* Use one (or both) of the following two systems for the stock assessment status description

Unidimensional	<input type="checkbox"/>	? - (or blank) Not known or uncertain . Not much information is available to make a judgment;
	<input type="checkbox"/>	U - Underexploited, undeveloped or new fishery . Believed to have a significant potential for expansion in total production;
	<input checked="" type="checkbox"/>	M - Moderately exploited , exploited with a low level of fishing effort. Believed to have some limited potential for expansion in total production;
	<input type="checkbox"/>	F - Fully exploited . The fishery is operating at or close to an optimal yield level, with no expected room for further expansion;
	<input type="checkbox"/>	O - Overexploited . The fishery is being exploited at above a level which is believed to be sustainable in the long term, with no potential room for further expansion and a higher risk of stock depletion/collapse;
	<input type="checkbox"/>	D - Depleted . Catches are well below historical levels, irrespective of the amount of fishing effort exerted;
	<input type="checkbox"/>	R - Recovering . Catches are again increasing after having been depleted or a collapse from a previous;

Bidimensional	Exploitation rate		Stock abundance			
	<input type="checkbox"/>	No or low fishing	<input type="checkbox"/>	Virgin or high abundance	<input type="checkbox"/>	Depleted
	<input checked="" type="checkbox"/>	Moderate fishing	<input type="checkbox"/>	Intermediate abundance	<input type="checkbox"/>	Uncertain / Not assessed
	<input type="checkbox"/>	High fishing mortality	<input type="checkbox"/>	Low abundance		
	<input type="checkbox"/>	Uncertain / Not assessed				

Comments

The result of the model show that this species is moderately exploited but the fishing effort should do not be increased in order to maintain a sustainable exploitation

SAC GFCM - Sub-Committee on Stock Assessment (SCSA)

Assessment form

Sheet Z

Objectives and recommendations

Code: SBR0309Sad

Management advice and recommendations*

For precautionary measurement, it is recommended to maintain the effort at the current level.

Advice for scientific research*

Accomplish the artisanal and longliners fishery landing sampling in order to estimate the biologic parameters for *Pagellus bogaraveo* in Moroccan coast, with the possible under the regional support.
