## SAC GFCM - Sub-Committee on Stock Assessment (SCSA)

**PLEASE READ CAREFULLY BEFORE STARTING THE DATA ENTRY**

### Macro - Security settings

In order to ensure the proper full working of this Data Entry System, **the macros must be allowed to run.**

To change the security settings, please go to: **Tools > Macro > Security** and then select the **Medium** level. Close and re-open the file.

Now you are ready to start by clicking on the Cover button!

### Control toolbox settings

To visualize the **Control toolbox** go to: **View > Toolbars > Control toolbox**

The Design Mode button must be **OFF**.

### WARNINGS

Please do not try to **Delete, Rename, Move** or **Copy** any Excel Worksheets.

Right now it is not possible to **Print** the completed worksheets only.

Once the data entry process is completed, the **file size** will be increased significantly. Before sending it by email, please compress the file by using any zip tool available in your pc.

### Colours and symbols meaning

#### WORKSHEETS

Green ► Not compulsory sheet

Orange ► Compulsory sheet

Red ►  Not completed sheet

Bright green ►  Completed sheet

#### CELLS

Black asterisk ► \* Compulsory sheet/field

Turquoise ►  Compulsory field not yet completed

White ►  Free cell

Light green ►  Cell with the scroll-down menu

Light yellow ►  Auto-complete cell

### Excel shortcuts

**Ctrl + C** Copy  
**Ctrl + V** Paste

**Ctrl + X** Cut

**SCSA Assessment Forms Release 2 (2007) beta version**

Since the SAC, and SCSA, inception (1999) a set of assessment forms were made available to scientists in order to provide a common framework to present assessments.

It has been decided to present a new release of these forms to facilitate their use. We took advantage of these upgrade to modify and amend some aspects. We would like to receive comments and suggestions from the users in order to improve the forms.

The structure of this new release is basically the same. The differences are:

- Migration from Word to Excel
- Some fields (yellow) are filled automatically
- Some sheets have been added
  - o A cover sheet with title, authors, species and GSAs
  - o A new sheet "other" allowing to include assessments based on methodologies other than the usual ones.
  - o An abstract sheet to be included (copy/paste) in the SCSA report
- It is more clear what sheets or fields are compulsory to fill
- The sheets for direct methods have not been yet upgraded

**Excerpts from the presentation of 1<sup>st</sup> version of the assessment forms (1999), however the sheet "other" can be used in such a case**

Each assessment consists of several sheets. Each assessment will take, at least, one sheet of paper numbered "0" (Sheet #0) and will also include no less than one copy of sheets "B", "P1" and "P2a" (now using the current "operational units" terminology). It is not compulsory to fill out any of the other sheets that make up this assessment form, but the person in charge is supposed to fill out some of them: otherwise no assessment is actually made. There may be more than one copy in several cases. Sheets "D" (diagnosis) and "Z" (conclusions and recommendations) should be considered as essential too.

Sheet	Title	Contents	# of sheets	Priority
0	Preliminary basic data on the assessment	Species, person in charge, date and code. All the sheets that belong to the same assessment share this code.	1	Indispensable
B	Biology of the species	Biological parameters used in the analyses (it is assumed that only one set of parameters is used).	1	Indispensable
P1	General information about the fishery	Catches by gear and associated fleet.	1 or more	Indispensable
P2a	Fishery by Operational Unit	Time series for the operational in question, including structure by size (or age).	At least as many as the OU numbers	Indispensable
P2b	Fishery by Operational Unit	Accompanying species and regulations applicable to operational unit.	At least as many as the OU numbers	If available
G	Indirect methods: global model	Description of model, data, parameters and results of each analysis.	As many as used in the analysis	If available
A1	Indirect methods: VPA, LCA	Description of model used and of general results of an analysis.	As many as used in the analysis	If available
A2	Indirect methods: data	Description of data used by gear for the analysis in A1.	As many as used in the analysis by OU	If available, requires A1
A3	Indirect methods: results of VPA	Detailed description of results by gear, structured by size or age.	As many as used in the analysis by OU	If available, requires A1
Y	Indirect methods: Y/R	Description of model, data, parameters and results.	As many as used in the analysis	If available
Other	Other assessment methods	Description of model, data, parameters and results of other assessment methods not included in the previous sheets.	1	If available
D	Diagnosis	Synthesis of results of analyses and diagnosis on the state of resources.	1	Indispensable
Z	Objectives and recommendations	Set the objectives to be attained and recommendations for their attainment.	1	Indispensable

C	Comments	At the option of the person in charge.	Unspecified	If available
---	----------	--	-------------	--------------

This sheet will be activated once the Operational Unit information (P1 section) will be successfully filled in  
 This sheet will be activated once the P1 Section will be successfully completed

**Comments**

Genus *Pagellus* is represented in the Egyptian Mediterranean waters by two species: *Pagellus erythrinus* (red or common pandora) and *Pagellus acarne* (axillary sea bream). Both species are usually found with *Pagrus* species in the catch and all are landed under one category. *Pagellus erythrinus* consider by about 60% of this category. The trawl fishery exploits the common Pandora with 22-30 mm diamond mesh size codend, thus the catches included small size specimens.
