Current and lost wetted areas (ha) of European eel habitats by typology (cumulative and by country), total number of sites surveyed and percentage of sites for which data were not available

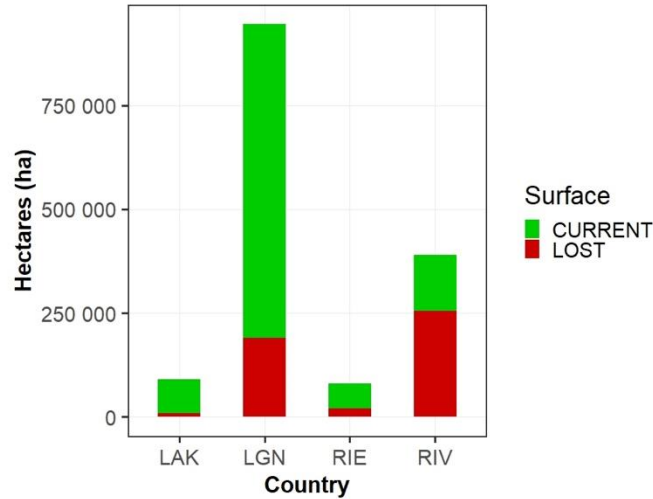

Figure 1. Cumulative surfaces of all countries per habitat type

In the following tables (Tables 1–4), the following are reported for each habitat type:

- the current and the lost surfaces (in hectares);
- the percentage of unavailable area with no data; and
- the total number of sites and the number of sites with no data.
