

### Definitions of data quality indicators

INDICATORS	DEFINITION	CHECKS
<b>TIMELINESS</b>	Transmission of data table (DCRF subtask) by CPCs meets the official deadlines set under relevant GFCM recommendations	<u>Number</u> of days between the transmission of each data table (DCRF subtask) and the official deadline
<b>COMPLETENESS</b>	<p><b>Completeness / Mandatory fields</b></p> <p>Compulsory information in each data table (DCRF subtask), as required under relevant GFCM recommendations, are transmitted by CPCs</p>	<u>Percentage</u> of mandatory data fields with missing values. The check also considers missing mandatory data for the expected combinations of “GSA - Fleet segment” that are not reported in each table (DCRF subtask) despite they were communicated by the CPC at the beginning of the year within the DCRF selection process.
	<p><b>Completeness / GSA - Fleet segment</b></p> <p>Combinations “GSA - Fleet segment”, as communicated by CPC at the beginning of the year within the DCRF selection process, are reported in each data table (DCRF subtask), if applicable.</p>	<u>Percentage</u> of missing combinations “GSA - Fleet segment” [DCRF selection process]
	<p><b>Completeness / Species</b></p> <p>Priority species, as communicated by CPC at the beginning of the year within the DCRF selection process, are reported in each data table (DCRF subtask), if applicable.</p>	<u>Percentage</u> of missing priority species [DCRF selection process]
<b>CONFORMITY</b>	Information in each transmitted data table (DCRF subtask) adhere to GFCM standards (codification and format)	<u>Percentage</u> of data rows with anomalous values. This check also includes duplicates
<b>STABILITY</b>	Information in each transmitted data table (DCRF subtask) is within acceptable limits compared with values of the same variables in the recent past	<u>Percentage</u> of data rows with values outside the expected range (threshold of 10%) for each data table over time
<b>CONSISTENCY</b>	Information in each transmitted data table (DCRF subtask) is coherent with the values of similar variables reported in different data tables, where applicable, for the same reference year	<u>Number</u> (or <u>percentage</u> ) of data rows with incoherent values (data fields) in relevant data table (DCRF subtask)
